## Recommended baseline (Gold)

- Start with HTF bias: 1H/4H
- Show structure: BOS/CHOCH + swings
- Keep liquidity lines ON
- Enable OB + FVG (key only)

## Clean chart rules

- Trade at zones — not in the middle
- Hide low-quality timeframes
- Confirm before entry
- Use fixed risk per trade

# 1. What this indicator is built for

Smart Money Concepts (SMC) is designed to help you trade with structure: market bias, key swings, BOS/CHOCH, liquidity, order blocks and fair value gaps — without drawing everything manually.

## Core structure

- BOS/CHOCH to define trend shifts
- Swing points + structure labels
- Liquidity lines to frame where stops sit

## Zones & concepts

- Order blocks (supply/demand)
- Fair Value Gaps (FVG)
- Premium/Discount framework for entries

Goal: identify context → wait for price to reach a zone → confirm → execute with risk management.

## 2. Recommended setup (XAUUSD / intraday)

Keep it clean. Use higher-timeframe context first, then let SMC add precision. Start with defaults, then adjust visibility for your chart.

### Timeframes

- Bias + structure from 1H / 4H
- Execution on 5m / 15m
- Hide noisy lower-timeframe objects if needed

### Visibility

- Enable only what you trade
- Keep liquidity + OB/FVG on
- Use dashboard to avoid overtrading

### 3. A trader's workflow (simple + repeatable)

Use SMC as a framework, not as a signal spam tool. Your strategy decides the entry — SMC provides the map.

#### Step 1 — Context

- Mark HTF zones + bias
- Identify recent BOS/CHOCH
- Note liquidity above/below swings

#### Step 2 — Wait

- Let price return to a zone
- Prefer premium/discount alignment
- Avoid entries in the middle

#### Step 3 — Confirm

- Look for shift (CHOCH) on LTF
- Use OB/FVG reaction
- Execute with stop beyond invalidation

## 4. Alerts (clean + useful)

Alerts should notify you when conditions happen — not tell you to buy/sell. Only enable what matches your plan.

### Good alert set

- BOS/CHOCH events
- New OB / FVG formed
- Liquidity sweep / reclaim (if used)

### Keep it disciplined

- Reduce alert spam by timeframe
- Confirm manually before entry
- Use fixed risk (e.g., 0.5–1% max)

Style: sessions + premium/discount backgrounds + alert

Alerts: clean + useful parameters (avoid noisy signals)

## 7. Quick FAQ

### **Does this work for scalping on M1/M5?**

Yes — but use higher-timeframe bias first. On very low timeframes, hide extra objects and only trade at pre-defined zones.

### **What markets are best for SMC?**

SMC works on any liquid market. Most users apply it on XAUUSD, major FX pairs and BTC/ETH where structure is clearer.

### **How do I avoid overtrading with SMC?**

Only trade at zones, wait for a clear shift (CHOCH/BOS) and keep risk fixed. If conditions conflict, skip the trade.
